Subject:	Add support for enhanced document management		
Description			
<p>The idea is to allow users to have an easy and familiar way to control non-source code files. It should be versioned when needed and work similar to file management. Meta-data is a plus.</p> <p>First implementation concept is using webdav module for easier sharing of engineering documents. Look at this plugin. Need to research what can be done to add version control support to this feature. Also look at integrating svn access through this connection.</p> <p>Should also evaluate moving live ODE site from http to https before implementing this feature.</p>

Alternatively, we could use this [document management plugin](#). Doesn't look like it supports direct access from a file browser, but it does look like it has drag and drop to the browser and a workflow system.

- % Done changed from 0 to 70

DMSF added to svn. (Little Lines)

DMSF installed on server. (Little Lines)

09/23/2011 10:05 pm - J. Simmons

Currently getting a 403 error when one tries to save project settings for DMSF. I have reported this to Littlelines for investigation.

- Status changed from In Progress to Resolved

Initial configuration set. May need to revisit this later, but it seems to be working.
