Subject:	For Pay Private Projects		
Description <ul style="list-style-type: none">- Integration with payment processing (as another feature)- Turning private projects into a “sellable feature” (aka restrict number of users in private projects, tiers of private projects, etc)- Test that the projects are well and truly private- Preferably have all of this automated in terms of selling the feature (user clicks buy, server turns collects money, server turns on feature, feature gets turned off if money stops coming in, user can cancel, etc)
